THE LEARNERS LAB FOUNDATION (TLLF) MATH+SCIENCE=TECHNOLOGY CENTER (MSTC)

The Learners Lab Foundation (TLLF) operates a Technical Assistance Service Center (TASC), designs and manages a portfolio of workforce training focused charitable programs, and serves as a Fiscal Sponsor to 501c3 start-ups. We develop, create and secure access to free and low cost professional development programs, and help new & young become established, and future 501c3's launch & mobilize their operations. We are working to build a proprietary network of business, technology, finance, communication, and funding access resources for those we serve. As a thank you, our partners, vendors, and stakeholders will enjoy the same benefits. *Look for our Virtual Private Lab/Library (VPL) (tm) and our Fiscal Sponsorship site, InfoXchange to go live around mid-2018!*

The Learners Lab Foundation (TLLF) is a trend setting, forward thinking charity of volunteers. We are working to change the workforce training environment and inspire a model of delivery where the labor pool is free to prepare for the skills they are expected to possess. Employers demand both raw and specialized skills in real time. That means "training should be available for to everyone for everyone." Our motto is "Filing in Gaps, Making Things Happen." We're doing just that!

CORPORATE ENTERPRISE PARTNERSHIPS

TLLF's plans *Partnerships* with a broad segment of enterprise businesses to establish the *Foundation's Math+Science=Technology Center (MSTC)*. The purpose and vision for this partnership is to encourage Math, Science, and Technology innovators to offer more open-access to their organizations thru introductory training programs that lead to intern an apprenticeship, even company expansion.

The Foundation hopes to encourage interest by making them visible within one facility as educational, vocational, and career option. This would be a profound experience for those new to the workforce or those still in school because it will help them establish a real-time connection between themselves and subjects they study in school. And they come to learn how this applies to the workplace, creating more *realistic* value of the education system in their eyes.

How This Will Work

MSTC would be divided into quadrants, with each TLLF Corporate Partner occupying its own wing. Part of a four-six (4-6) story building on our facility, we're hosting ongoing training that's an extension of our Partners' internal professional development effort.

The main floor will house lounges for networking, small meeting areas for on the spot interviews. Our Conference Hall will host Hiring Events and include interactive displays highlighting skills training, an interactive job board with real-time vacancies posted by on-site hiring managers. And no worries, *No Recruiting Firms Allowed!* The MSTC facility is intended to be a true workforce networking venue for *Visitors, Job Hunters, Hiring Employers, and Corporate Partners.*

<p><u><i>An Environmentally Focused Entity</i></u> (think NASA or Chesapeake Bay Foundation) (represents environment + science + math + natural sports (fishing, sailing), + careers possibilities)</p>	<p><u><i>A Multi-National Conglomerate Entity</i></u> such as Siemens or Bayer which represents how different technologies create everything humans use & need</p>
<p><u><i>A Heavy Equipment or Transportation Company</i></u> such as John Deere, Caterpillar which represents building and the use of math, science & technology, all the engineering disciplines</p>	<p><u><i>Either A Wind Energy Company or a group such as the American Wind Energy Association (AWEA)</i></u> which represents knowledge, skills and jobs improving our carbon footprint, clean energy air usage, etc.</p>

Through the MSTC we hope to show how Math + Science can lead to a variety of fun and engaging careers from science engineering, to environment management and even sports & music that all use technology in a different but necessary way. Visit TLLF's web page regularly for more information as this program effort develops.

Success will always require business and community partnerships, and ours will be a game changer! TLLF wants to assure the substances driving our efforts to make training resources available for anyone who wants them is always aligned with the skills and knowledge employers' demand across the business community regardless if public or private sector, academia, or the government.

Like your company to be a part of The Foundation's *Math+Science=Technology Center (MSTC)*? That's easy, just call 240 770 7806 or email us at MathScienceTechnology@TheLearnersLab.org today! We'll reach back as quickly as we can.

Thank your for your time and interest in The Learners Lab Foundation.
